

Sesame Phone

WHAT IS SESAME PHONE?

A touch-free smartphone you can control by moving your head.

Newsweek

"With the Sesame smartphone, those with mobility impairments can call, text, surf the Web, participate in social media and play games, just like anybody else"

Forbes

"Livne...can now even control some of the internet connected devices in his home, including the TV, air conditioner and lights, because of integrations with his Sesame Phone. This ability to control a smart home is where even greater potential for the phone probably lies."

FAST COMPANY

"It's like going from the stone age to the space age"

Verizon Powerful Answers Award

The world's first touch-free smartphone

Powered by voice control and cutting-edge head-tracking technology, Sesame's patent-pending software uses a computer vision algorithm to track a user's head movements with extreme precision and is able to detect the entire range of movements – from adult to child, and from severe to minor restrictions of head mobility.

Through Sesame's software layer, the user gain access to the entire world of apps, which means users will also be able to Tweet, post to Facebook, send instant messages, make phone calls, or download any of the other millions of apps and use them touch-free.

2015 Sesame Enable Ltd., All Rights Reserved

DS 3/2015

- **Touch-Free Control**
Gesture recognition understands small head movements, eliminating the need for touch.
- **Integrated Voice Control**
Use your voice to turn on/off the phone or switch between applications.
- **Download Apps**
Touch-free interface extends to nearly any app from the Google Play store.
- **Works Out of the Box**
Works touch-free immediately, no additional set-up required.
- **Affordable & Elegant**
No external hardware required.

Designed by the disabled for the disabled, the Sesame Phone opens a new world of communication and independence to a population that needs it most: people with spinal cord injuries, ALS, Cerebral Palsy, severe Parkinson's, Multiple Sclerosis, severe arthritis, carpal tunnel syndrome, and other disabilities that impair the use of the hands and arms.

Sesame Phone is highly customizable and works with very small head movement range.
